

Technical Bulletin 2021-03001

Applies to:

XPOSE mini app Windows/macOS
mini/mini+

Overview:

Release of XPOSE mini application - in-band update.

This release focuses on functionality enhancements, as well as consistency improvements between the virtual and physical devices, crushed some small bugs.

Details:

Version 1.0.2.1 [March2021 Release]

Key Updates/Fixes:

- **Update:** Refinements for Chroma Key
 - When Chroma Key is enabled, it is no longer required to enable a PIP preset – turning on Chroma Key opens the [B] video layer automatically, so operation is now more intuitive and as expected.
 - Chroma Key settings are saved/recalled following app restart/reconnect.
- **Update:** Signal Selection Layer
 - PIP menu now provides layer selection for the signal selection buttons [A] for main/PGM or [B] for the PIP (also Chroma Key). Feature in XPOSE mini provides parity with the on-device functionality.
- **Update:** TBAR CUT Option
 - CUT button in the MIX (Transitions) menu when in TBAR mode. Note that minimum Firmware V1.07 (mini) or V1.24 (mini+) is required for this functionality
- **Update:** Minor improvements in overall app performance and stability
